Blueprints for the Week

December 15, 2017

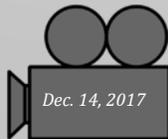

Editor – Deputy Chief Jim Jensen

Volume 2, Issue 14

Photo of the Week

The gun cleaning room and armory walls are going up! They are located in the training wing, just outside of the range. In this picture, they are framing the door leading into the armory.

Video Clip of the Week

This week's video is another time-lapse, containing 12 hours of footage, condensed into a 2 minute clip. You will see the crews in action preparing for the glass on the Southern wall and a lot of work being done on the roof.

What Happened this Week

NICE WEATHER, in mid-December??? Yes, we had some great weather to get work done! Cold temperatures create a lot of problems, not only with the workers but with the building materials as well. This week they have been able to shed a few layers to get some things done. The second floor roof is well underway. Crews began laying the vapor barrier and layers of insulation along the Eastern portion of the roof. By the end of next week they should be about 75% done with that floor. When the cold weather returns, that will make a huge difference in keeping the building warm.

Masonry walls also flew up this week! Crews did not have to heat the water or include additive in the mortar. Check out what these crews went through the week prior to get work done. I am so glad I am a cop!

The masonry silos are inside the structure with heat being pumped in.

What's Next ...

The curtain wall, which holds the glass, along the Southern portion of the building is almost ready for glass. Teams have been detailing and prepping this wall in anticipation of the glass being delivered next week. These glass windows are taking shape ... AND ... shaping the entire look of the building. This is going to look very cool when it is all done.
